NOTICE

NRSC Standards, Guidelines, Reports and other technical publications are designed to serve the public interest through eliminating misunderstandings between manufacturers and purchasers, facilitating interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining with minimum delay the proper product for his particular need. Existence of such Standards, Guidelines, Reports and other technical publications shall not in any respect preclude any member or nonmember of the Consumer Electronics Association (CEA) or the National Association of Broadcasters (NAB) from manufacturing or selling products not conforming to such Standards, Guidelines, Reports and other technical publications, nor shall the existence of such Standards, Guidelines, Reports and other technical publications preclude their voluntary use by those other than CEA or NAB members, whether to be used either domestically or internationally.

Standards, Guidelines, Reports and other technical publications are adopted by the NRSC in accordance with the NRSC patent policy. By such action, CEA and NAB do not assume any liability to any patent owner, nor do they assume any obligation whatever to parties adopting the Standard, Guideline, Report or other technical publication.

This Guideline does not purport to address all safety problems associated with its use or all applicable regulatory requirements. It is the responsibility of the user of this Guideline to establish appropriate safety and health practices and to determine the applicability of regulatory limitations before its use.

FOREWORD

NRSC-R33, High-speed Subcarrier (Digital) HSSC Laboratory Test Report, is the first of three test reports submitted to the NRSC's High-Speed FM Subcarrier (HSSC) Subcommittee. Three digital FM subcarrier systems were evaluated during these tests—DARC (submitted by Digital DJ, Inc.), STIC (submitted by Mitre Corporation), and HSDS (submitted by Seiko, Inc.). The co-chairmen of the HSSC Subcommittee at the time of the submission of NRSC-R33 were Michael Rau and David Kelly. The NRSC Chairman at the time of the submission of NRSC-R33 was Charles Morgan.

The NRSC is jointly sponsored by the Consumer Electronics Association and the National Association of Broadcasters. It serves as an industry-wide standards-setting body for technical aspects of terrestrial over-the-air radio broadcasting systems in the United States.

Main channel audio during 30 seconds of silence from
DAT Tape Logs under various operating conditions

Summary of FFT Plots

Contents:

The next 12 pages have a summary of the High Speed DAT test tape logs with minor operator comments.

This is followed by the plots themselves, numbered for each tape track.

Process overview

The FFT engine was cleared, reset and started 3 seconds into the 30 silence period on each track and stopped during the last 1 second. The composite peak energy seen across a DC to 25 KHz spectrum was captured and the result plotted. The device was set to bin this space into 400 equal spaced samples (providing a frequency resolution of 62.5 Hz). During this run, the operator listened to the output and observed the spectrum for any abnormal change in energy. If such was seen, an attempt was then made to get a "close up" of the time or spectrum of interest. Additional spectrum plots are provided in these cases.

General Comments

The number of each trace is found by looking at the tape number on the plot (example: HS40800) and the track ID marked next to each trace. In general the reference plots will be the bottom trace, while proponent traces will be above. The same general format of working with proponents in an A-B-C order followed by C-B-A was followed on the plots. Observe caution in reading the plots to avoid confusion of proponents.

The general format of the plots is from DC to 25 KHz of recovered left channel from the DAT tape plotted over a 100 dB dynamic range. When multiple plots are taken, they are moved upward by a 20 dB offset and plotted to the same scale and dynamic range. This was done for ease of comparison, the settings on the instrument are identical in each case.

The plots represent the peak amount of spectral energy seen at each frequency (normalized to a C/No of 1 Hz). The noise of the combined DAT tape player and ambient was found to be over 20 dB less than the noise floor of the recording. Analysis was performed in the lab with other equipment turned off to preserve the greatest dynamic range. We conclude that the range of data was not compromised by the DAT player or any other noise sources in the lab environment.

Comments on the Findings

The vast majority of these plots are uninteresting. This suggests that in the case of silence, the three proponent systems do not cross talk onto the main channel in any significant way. More specifically - that they do not as a rule impinge in any different way from one another.

In a few of the plots buzzes and whistles were heard, or pops occurs. This occurs during multipath fading as expected. The spectrum of such an event tends to be chaotic in nature - generally increasing the noise floor rather than having distinct spectral energy. This is the most common difference which can be seen in the tapes.

DIGITAL SUBCARRIER to HOST ANALOG
TEST D

Compatibility Baseband Recordings

A total of 156 two minute compatibility DAT recordings were made from the stereo audio outputs of the five compatibility receivers. Of the total (156), 57 recordings were without multipath, test D-1. Test D-2 is the remaining 99 tests with multipath.

The test audio was timed to the multipath simulator 27 second Rayleigh cycles. Four cycles (segments) were recorded for each test. The first three audio segments were selected from the EBU SQAM CD. The third segment was silence. A reference recording (without proponent) was made for each test group.

For the multipath tests the multipath simulation is started by a cue from the DAT recording.

Each test was evaluated by the lab staff (EO&C) using the scale in Table 3.

Table 1. Audio Segments

Segment	Segment Description
1	Abba
2	Female Speech
3	Violin
4	Silence
